15. Cancelled.
16. (new) A selective one-way wrench comprising:
 - a handle;
 - an annular head from which the handle projects, the annular head defines a first space and a second space communicated with the first space;
 - a gear rationally put in the first space, the gear including a toothead external face;

a direction controller put in the second space, the direction controller including two pawls and a spring installed between the pawls each including a rod formed thereon and a toothed face;

a driver put rotationally in the second space, the driver including two fingers selective one of the which contacts the rod of selective one of the pawls so as to bring the toothead face of the selected pawl into engagement with the toothead external face of the gear; and

a direction switch installed rotationally on the annular head and operably connected with the driver including a countersink hole communicated with the second space, and the direction switch is inserted into the second space through the countersink hole wherein the direction switch includes a disc and a shaft extending from the disc, and the driver is attached to the shaft.
